FINAL B2B PRODUCT CATALOG

Company Profile

Factory-direct hydraulic components for global B2B buyers

YUNLINK HYDRAULICS supplies hydraulic valves, orbital hydraulic motors, and hydraulic steering units for global distributors, OEM buyers, machinery manufacturers, and spare parts importers.

OEM & ODM Available

Replacement programs and customized configurations for distributors and machinery builders.

Technical Selection Support

Model matching by machine type, torque, pressure, displacement, and working conditions.

Fast Delivery

Production coordination and export-ready packing for urgent sourcing projects.

Global Export Supply

Documentation, communication, and packing workflows built for international B2B trade.

Product System Overview

Actual product photos for core hydraulic product lines

Hydraulic Valves

Pressure, flow, direction, and load-control components.

Orbital Hydraulic Motors

Compact hydraulic torque output for mobile machinery.

Hydraulic Steering Units

Steering control components for tractors, forklifts, loaders, and industrial vehicles.

Hydraulic Valves

Category display with product photo and application description

Relief Valve

Protects hydraulic systems from over-pressure.

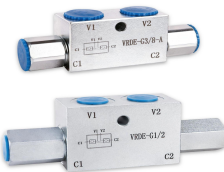

Counterbalance Valve

Controls load holding and movement stability.

Flow Divider

Distributes flow between hydraulic circuits.

Check Valve

Prevents reverse flow and protects components.

Ball Valve

Provides simple shut-off control for hydraulic lines.

Hydraulic Motor Series

BM series structure with product images prioritized

BM2 Series

Low torque | Light machinery

BMH Series

Medium torque | Agricultural machinery

BMM Series

Compact structure | Small hydraulic systems

BMSY Series

High torque | Heavy machinery

BMT Series

Very high torque | Industrial drive systems

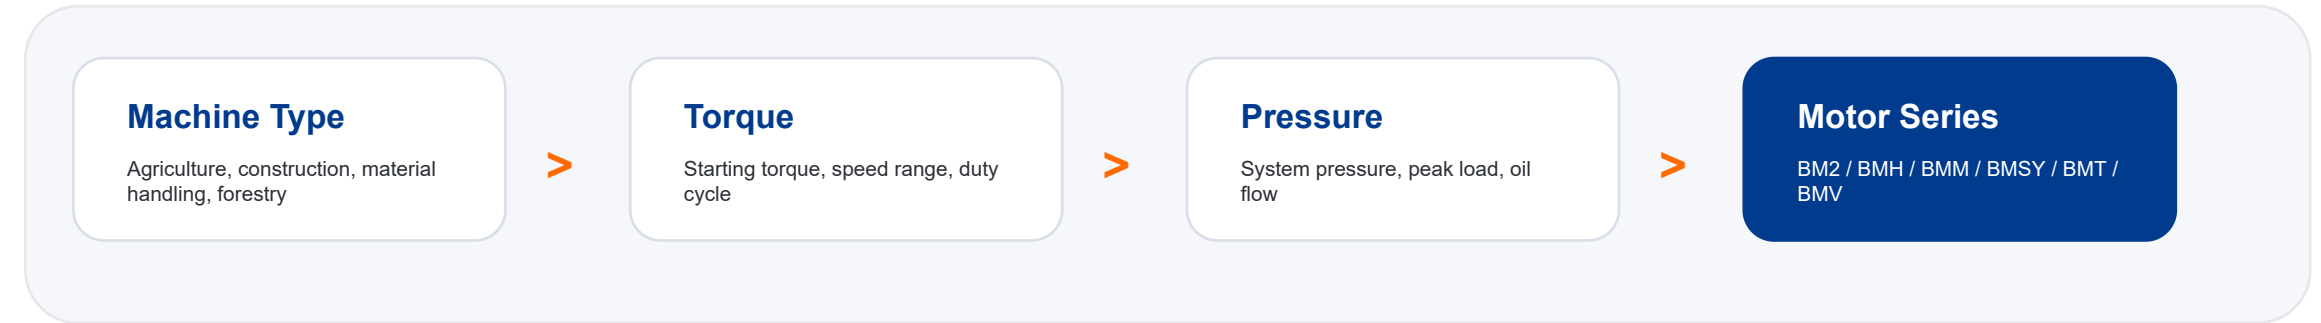

BMV Series

Precision control | Variable speed systems

Hydraulic Motor Selection Guide

Clear selection logic for distributors and engineering buyers

Selection checklist

- Required speed range and torque demand
- Continuous and peak working pressure
- Mounting, shaft, port, and rotation direction
- Target replacement model or reference sample

RFQ-ready output

Send machine type, pressure, oil flow, shaft/port details, and target model for accurate matching.

Hydraulic Steering Units

101S and 101S-5T series for mobile machinery steering systems

101S Series

Light-duty mobile machinery, agricultural tractors, and small loaders.

101S-5T Series

Heavy-duty vehicles, construction machinery, and high-load steering stability.

Selection Guidance

Confirm vehicle weight, system pressure, hydraulic flow, steering response, and safety requirements before choosing a steering unit.

Hydraulic System Applications

Application images from company folders

Agriculture

Tractors, harvesters, lifting, steering, and drive systems.

Construction

Loaders, excavators, and lifting machinery.

Material Handling

Forklifts, handling equipment, and production logistics.

Safety Systems

Load holding, pressure protection, and controlled movement.

Factory & Production Capability

Real factory, production, warehouse, and export packing visuals

CNC machining

Precision machining capability for hydraulic components.

Assembly

Controlled assembly workflow for repeatable product quality.

Testing

Hydraulic testing support before shipment.

Warehouse

Inventory and packing preparation for export orders.

Export packing

Packing process designed for international transport.

Quality Control System

Inspection points from incoming material to export packing

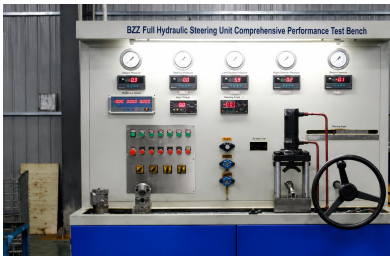

Incoming Inspection

Check incoming materials and key purchased parts.

Production Inspection

Monitor machining and assembly process quality.

Final Testing

Confirm product function before shipment.

Packing Inspection

Verify label, packing, and export readiness.
